JFK Head Wound 11/29/68 HW

Among the early inconsistencies I discovered in the Archives in tracing down the suppressed evidence on the President's injuries are a series of FBI reports showing the finding of a piece of the President's head 25 feet in the wrong direction and 29 hours after the assassination. I have this in the manuscript of POST Mortem. Thefinding was by William Allen Harper, whose uncle, Dr. Jack, was on the staff of Methodist Hospital.

The attached two reports add to the story. There is nothing in the published evidence indicating the existence of this information, nothing in the Report.

It is interesting that the pictures were not taken until 11/25, if this is the case, and that the hospital ordered secrecy. Had this not been the case, all of history might have been different.

I will be adding this to the ms and want nothing side of it. I am sending this for your information and files, for whatever to might mean to you and lead you to.
